

Style MSVR650M: Basalt Tape

0.042" Thick, Blend of Basalt and Fiberglass Plus+ Fibers

REVISED: SEPTEMBER 6, 2013

MSVR series of products combines two high-temperature fibers into one high-performance tape. The blended fibers deliver a tape that fabricates with ease, makes a great cuff tape, or provides added protection when used to cover high abuse seams. The added strength of the VR fibers coupled with the high-temperature performance of Fiberglass Plus+ delivers a tape that has a distinctive look while maintaining performance at service temperature. The custom M weave also provides a natural 'site line' for overlapping the tape in wrapped applications or a clear line for precise sewing and assembly with other components.

Base Material: Blend of Continuous Filament Volcanic Rock (VR) and Fiberglass Plus+ Fibers

Weave: M Weave

Thickness: 0.042" (+/- 10%)

Width: 2" standard. Other widths available (minimums apply)

Roll Length : 100 ft standard, custom available

Service Temperature : 1250°F
